

BioFit to Showcase Newest Laboratory Seating Models at Pittcon 2018

ORLANDO (February 26, 2018) – BioFit Engineered Products, a globally recognized manufacturer of ergonomic seating solutions for technical workspaces, will display its latest seating for laboratories February 27 through March 1 at Pittcon 2018. Models from the company’s “one-of-a kind” MVMT™ line will headline the exhibit. Other highlights include the Fin sit-stand, designed for workplaces where prolonged periods of standing are prevalent. Company representatives will conduct in-booth product demonstrations daily as well as a presentation on standards and specifications of technical workplace seating on March 1.

BioFit MVMT seating was developed for use in the laboratory, technology, healthcare and industrial sectors, and standing desk workstations. As technical applications require different ergonomics compared to those associated with office-oriented tasks, BioFit primarily designed the MVMT line to address the unique movements and working postures of users in specialized work environments. The line consists of two series – MVMT Pro and MVMT Tech. Models found in the premier MVMT Pro series include a dozen lab-centric functions, including forward seat tilt to address forward-leaning positions and an adjustment control lockout for precision tasks requiring no motion. The line combines precision and durability with an aesthetic not normally associated with traditional laboratory and technical workspaces, with models available in clean room configurations ranging from ISO 8 to ISO 3, and static-control and joint clean room/static-control packages. There is no other seating line on the market today that offers the full range of features that the MVMT line has to offer.

The Fin sit-stand was created for use in technology, laboratory, educational, healthcare and industrial workplaces. It is designed for tasks requiring extended periods of standing and enables users to decrease stress on their legs and feet. This model features a swiveling seat with fingertip-controlled height adjustment mounted on an inclined column and stable base, all engineered to promote a positive working posture. The Fin sit-stand is also rated for use in ISO 7 clean rooms.

Located in Bowling Green, Ohio, BioFit Engineered Products is a leading manufacturer of LEED-compliant ergonomic chairs and stools, GREENGUARD Gold-certified mobile tables, multipurpose carts and accessories for laboratory, healthcare, technology, education, industrial, and office environments.
