LNI Swissgas to Exhibit at Pittcon 2019 in Philadelphia.

LNI Swissgas will head to Philadelphia for Pittcon, the world's leading annual conference and exposition on laboratory science from March 19 to 21, 2019, at **booth 1913**.

LNI Swissgas will showcase the innovative Nitrogen generator **CASTORE XL** which uses a new technology combining a scroll compressor and an inverter to regulate the flow for a continuous and on-demand supply of pure nitrogen to the applications. This technology is unique, patent pending and brings many advantages in terms of energy savings: it supplies less air and generates higher purity nitrogen. It allows also to have less maintenance costs by postponing the major interventions on the compressor. The first preventive maintenance should be indeed at 20000 hours of operation against 4000 running hours with standard today generators. Finally, the operation is quiet due to unique compressor management and the **CASTORE XL** can be installed in the lab close to the instrument.

NG CASTORE XL with combined outputs, Nitrogen dry air and UHP nitrogen for collision cells, has been specially designed to the most special requirements in terms of gas, flow and pressure to all LCMS applications on the market!

Visit LNI Swissgas, stop by booth 1913 during Pittcon 2019 for more information and to check our latest generators.

LNI Swissgas is a genuine multinational reference in the sector of gas generators, gas mixers and gas calibrators for analytical, industrial and environmental applications: more than thirty years of know-how, 100% in-house production, continuous improvement and a unique R&D at the forefront of the market in order to always offer the best innovative solutions that anticipate and meet the most specific needs of the customers. LNI Swissgas is proud to offer the smallest generators, the most innovative generators with the latest technology on the markets and is the only one to offer a complete range of RACK 19" products, from generators to mixers, always to satisfy customer's needs.

LNI Swissgas maintains ISO 9001 for corporate activities, research and manufacturing. In order to satisfy high metrological requirements, LNI Swissgas has been working several years with its own accredited ISO 17025 calibration laboratory.
